

## Exercise 1

Create a new Java project and a class with the main method as an entry point to start the project.

In the main project, create a program that asks for:

Name

Age

Height

Favorite subject

Then print a short introduction sentence such as:

Hello! My name is John.

I am 20 years old and 175 cm tall.

My favorite subject is Programming.

Using Scanner and BufferedReader to implement the task

Capture the console log after running the app.

## Exercise 2

Write a Java program that, when run, allows the console to accept an integer as input and prints "This is a positive integer" if the number entered is greater than or equal to 0, otherwise prints "This is a negative integer".

## Exercise 3

Write a program that allows the user to input an integer (as a digit), then have the program print that number spelled out in words.

Example: 1 → One, 2 → Two, ...

## Exercise 4

Write a program that allows the user to input 3 real numbers. The program checks whether these 3 numbers can be the 3 sides of a triangle.

## Exercise 5

Write a program that allows the user to input 3 numbers. The program checks whether these 3 numbers can be the 3 sides of a right triangle.

## Exercise 6

Write a program that reads a single character and checks whether the character entered is a vowel or a consonant.

## Exercise 7

Write a program that accepts a deposit amount from the user and calculates the interest earned in one year. The bank pays interest depending on the deposit amount:

- 4% for deposits up to 2,000
- 4.5% for deposits up to 7,000
- 5% for deposits over 7,000
