

Create a new Java project and a class with the main method as an entry point to start the project.

In the main project, create a program that asks for:

Name

Age

Height

Favorite subject

Then print a short introduction sentence such as:

Hello! My name is John.

I am 20 years old and 175 cm tall.

My favorite subject is Programming.

Using **Scanner** and **BufferedReader** to implement the task

Capture the console log after running the app.
